Progress

White Energy Ethanol

Christian Ray and Greg Evans have just finished work at the White Energy Ethanol plant in Hereford, Texas. They installed cable tray, pipe and wire for the urea & beer de-gas project. Both Christian and Greg were on site for about 3 weeks prepping for a shutdown later this year. They installed about 180 feet of cable tray and will be pulling wire this week. This project includes motors for pumps and blowers, along with instrumentation. Decker Electric journeymen have been working closely with SBI Bioenergy who are the millwrights on this project.

Staff

Notable Work Anniversary

Congratulations to Johnny Teeter and Kyle Kennedy who are both celebrating 5 years with Decker Electric! Thank you both for all of your hard work and dedication over the last five years.

Iron Horse-Hyper Pet Tenant Finish

The Hyper Pet Project finished today. Project Team Leaders Clint Allmon, Ryan Atchison and Dave Wiley led the crew on a fast-pace schedule. Decker Electric appreciates the opportunity to work alongside Dondlinger Construction and Hyper Pet. The entire team has done a great job.

Progress

Trimble Robotic Total Station

Using our Trimble Robotic Total Station (RTS) as a live link between design documents and the construction site has been a great success to being more efficient and accurate with layout and accelerating construction activities.

Our crews are able to view the 2D drawing or 3D building model on a tablet. They use survey points from on-site to locate the RTS which then gives the operator the ability to view the model in reference to its position. Using precise dimensions, the RTS uses a laser and allows us to mark points on-site with incredible accuracy.

Decker Electric is one of the few electrical contractors to utilize this equipment within the state.
